The Sentry *Doorstation series* are powerful all in one, interactive telephone units that thinks for you. They offer security and control literally at your finger tips. Designed to fit any place you require a high quality, loud speaker, hands-free telephone. It is well suited for homes, hotels, hospitals and universities as well as many business and commercial settings. Protecting you against unwanted entry onto your property, this unit will give you the ability to authorise access to welcomed visitors without having to leave the comfort of your home or office. The Sentry, *making sure your safety and well-being come first!*

options:

There are four models available in the Sentry series, all with their own unique features;

LP this unit is totally telephone line powered and will supply sufficient audio level for low noise environments.
Doorcom designed for general purpose situations, it features easy programming for quick installation *(power pack supplied)*.
this unit features interactive voice prompt for quick and easy programming *(power pack supplied)*.
VoIP **using a CAT5E cable to connect to a computer serve which acts as the PBX.**

All three models have the same general basic features and casing options. For further details on which model will best accommodate your needs please refer to each respective brochure; *Sentry LP*, *Sentry Doorcom*, *and Sentry VoIP.*

This brochure will outline the common physical features of the Sentry doorstations.

keypad:

There are two options available for the Sentry *keypad diallers*, one is the **standard dialler** and the other a **speed dialler.** Both diallers boast a vandal resistant 4x3 metal keypad. A *standard dialler* will operate similar to a normal hands-free telephone, pressing the '#' key will turn the unit on, then simply dial in the number you wish to call. To end a call or hang up the unit, press the ' * ' key. Alternatively there is the *speed dialler*, which stores preset numbers in the Sentry and the user simply presses a location number on the keypad to dial the number stored for that preset.

The standard panel size for all Sentry units are 130.0mm x 270.0mm, custom panel sizes and layouts can be tailor made to your needs. Panels are available in either vertical or horizontal, and can be anodised aluminium or stainless steel. If you require the panel to be made of different material (ie. brass, gold-plated, etc), this to is available upon request.
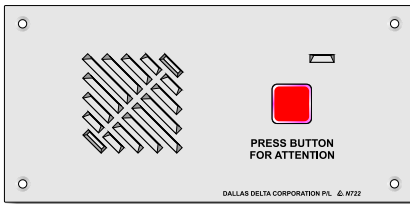

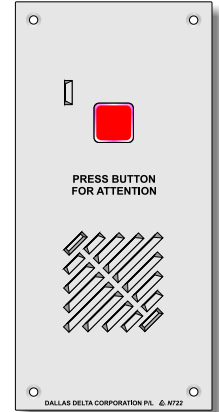

auto dialler:

The Sentry *auto dialler* is a single button doorstation which will dial a preset number once the button is pressed. The duration of how long the button needs to be depressed for before it makes a call can also be set. If the line is engaged or there is no answer the Sentry can be programmed to dial a second destination. If continuous or engaged tone is detected the Sentry will automatically hang up. In the event of noisy environments a *push-to-talk* feature can be implemented in order to overcome the background noise level while on a call. *(all models).*

multi number dialler:

The Sentry *multi number dialler* offers similar features to the single button *auto dialler*. Each button on a *multi number dialler* can be programmed to have its own unique number. Each button can also have an engraved label next to it to help identify its call destination or a call card can be inserted into the panel so that the call numbers and labels can be changed with ease. When ordering your *multi number dialler* you can specify exactly how many call buttons you want. The panel size may vary depending on the amount of buttons requested.
