Wireless Intercoms & GSM Access controls

Model GSM-18V4.1

Stand Alone GSM ACCESS CONTROL

Program up to 3000 users to open the gate with mobile phones with

NO cost of a call & NO limit of range.

Enables programming 400 "special users" to access on special days of the week at special times.
Easy installation - four wires only.
Programmable by SMS commands.

Model GSM-18VYT

Remote Yearly and Weekly programmable timer with Professional GSM Access Control. In addition to its weekly timer the unit allows programming public holydays and specific time intervals for each day of 12 months ahead. This allows triggering the gate / door to stay open or close in a specific days and time intervals. The unit also Includes professional GSM access control for up to 3000 users to open the gate with mobile phones with no cost of a call and no range limit. The unit also can be programmed with 1000 "Special Users" which have limited access and can enter only on specific days of the week and within specific interval of times. Moreover, the unit sets the local time for daylight saving automatically twice a year without the need of setting it manually. All the programming is done by SMS. Ideal for schools factories and public facilities.

Multi Channel GSM Intercom with Wireless LIFTS Access Control

NEW Product

Stainless-steel multi apartment GSM intercom for up to 330 apartment units. Including anti-vandal illuminated metal keypad and GSM Access Control.

This unit Includes **wireless lift interface** to control up to **three lifts** in the building **wirelessly.**
The lift interface limits the visitors to access ONLY specific level floors in the building after they given access by the intercom.

This unit works with ECA wireless **Master Lift Interface Model: MLI-3**

This intercom system communicates wirelessly with the lift interface (MCI-3) located in the lift's control room in the building. The lift interface sends the lift to the ground floor for the visitors and allows them to access ONLY the floor in which the apartment is located and answered the call of the intercom.
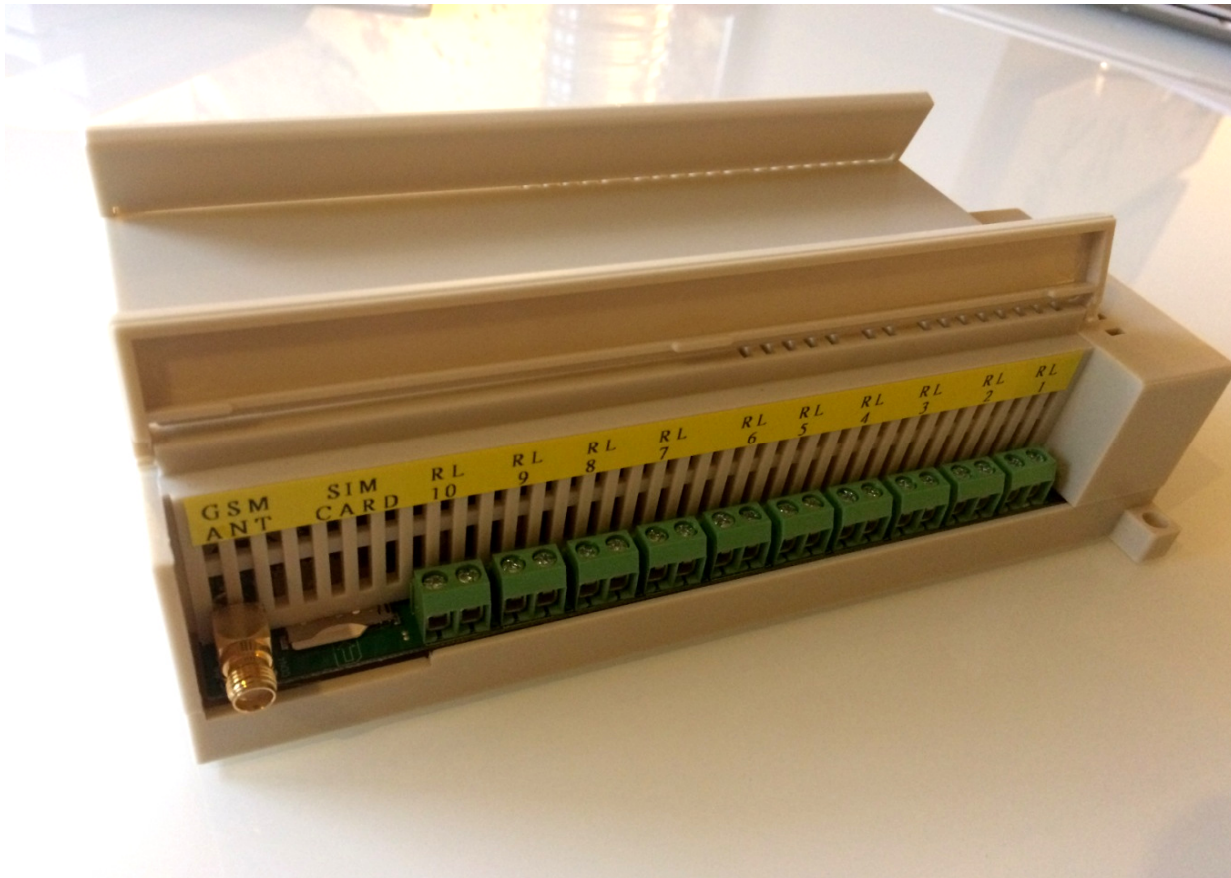

Master Lift Interface Model : MLI-3-XX

Wireless **Master Lift Interface** for Multi Apartment GSM intercoms MCI3000V4 and MCI300V21, for buildings with lifts that require security access to each floor in the building.
You can choose the unit according to number of floor level in the building: MCI-3-**XX**

MCI-3-**10** floor levels
15 floor levels
20 floor levels

For more than 20 floor levels, you would need to add SL10 slave module. (See below).

Extension Slave Module : **SLI-XX**   **(**Doesn't need a SIM card)
SLI-10   Extension for Lift Interface MLI-3 for additional 10 floor levels
SLI-20   Extension for Lift Interface MLI-3 for additional 20 floor levels

Please note that you can add unlimited SLI-XX units to MLI-3 to control unlimited floor levels in the building.
