TS Series

Save time and improve reliability with your next cable installation.

Garland's TS series for Category 5E, 6 and 6A applications offers a time saving and reliable cable connection, based on Keystone style jacks.

The TS Series includes:

- Jacks
- Keystone Patch Panel
- 8-way tool

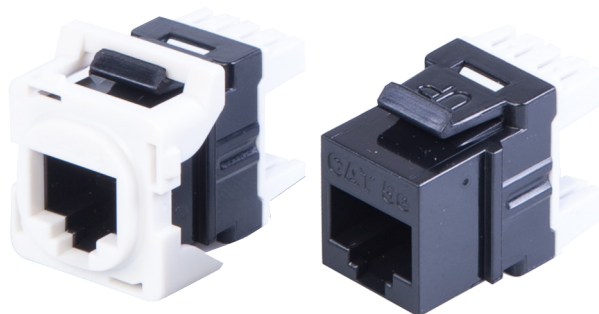

TS Series Jacks

Garland TS series jacks are designed to be easy to use, are available in all common configurations and fit both Keystone and Clipsal Mech30 faceplates.

Using the Garland TS series tool, all eight wires in the jack can be terminated in one action allowing for faster and more reliable terminations. The IDC will also accept termination using industry standard 110 and KRONE tools.

TS series jacks are available in Cat6A, Cat6 and Cat5E unshielded versions as well as a shielded Cat6A version.

TS Series unloaded patch panel

The Garland unloaded keystone patch panel is designed to accept the TS series of keystone jacks. Made of heavy duty powder coated steel, it comes with all mounting hardware including a rear cable management bar, cage nuts and mounting screws.

The patch panel accepts both shielded and unshielded Garland TS series jacks and comes in a modern black finish.

TS Series Tool

The Garland TS series tool is designed to terminate and cut 8 wires on a TS series jack in one simple action. The ergonomic handle eases strain on the installer and eliminates the need for a holder or surface to rest the jack.

The single action termination allows for faster installs and fewer faults, saving both time and money. The preset cutting blade ensures that the cable ends are cut at the optimal length to prevent shorting of the cable on shielded jacks, and eliminates the need for a separate cable trimming operation. The one tool will accept both shielded and unshielded jacks from Cat5E, all the way up to Cat6A.

Benefits

- Keystone style for individual jack installation and maintenance
- TS series tool terminates and trims all 8 wires in one action
- Reduced installation time and improved reliability when terminated with TS series tool
- Jacks also compatible with standard 110 and KRONE type tools
- Jacks are supplied with a free bezel to allow installation into Clipsal style faceplates
- Available in unshielded Cat5E, Cat6 and Cat6A and shielded Cat6A options
- Single unloaded patch panel is compatible with both shielded and unshielded jacks

Product Set

Part number	Description
MT54501KC-BKWH	Outlet RJ45 Cat5E Keystone Style TS Black/White
MT64501KC-BKWH	Outlet RJ45 Cat6 Keystone Style TS Black/White
MT6A4501KC-BKWH	Outlet RJ45 Cat6A Keystone Style TS Black/White
