

# ES6000 HOOK LOCK

The Trimec ES6000 surface mounted Hook Lock has been designed with the architect in mind. The ES6000 has a cast aluminium cover that can be supplied in a variety of colours to match existing door frames. The lock is suitable for swinging doors, sliding doors and is easily attached to wood or steel door frames.

On a standard 2040mm door frame this low profile lock complies with the minimum headroom requirement as stipulated in the Building Code of Australia.

With its high preload (side load) capability (up to 300kg), high holding force (up to 700kg), up to 4 hour fire rating, ES6000 Hook Lock is ideal for fire door and escape route applications and anywhere where a mortice mount version for a sliding door application is suitable.

**Power to Lock / Power to Open**  
*Version Available*

**Side Load (Pre-Load) Capable**  
*Operates freely with up to 300 kgs of side pressure*

**Self Latching**  
*Will self latch without power for fire applications*

**Up to 700kg holding force**

**Robust Construction**  
*Stainless steel components used*

**Low Profile**  
*Will protrude only 40 mm into door headroom*

**Multi-Voltage**  
*Automatic selection of 12 to 30 Volts dc with back EMF protection and reverse polarity protection*

**Multiple Orientation**
