

## 2T7000M PATIENT TAG

### Product Information Sheet

The Protrac ID Patient tag is an Ultra Long Range RFID emergency bracelet tag used in Patient Wandering Alert, Baby Theft Alert and Occupational Health and Safety applications.

The 2T7000 is attached to a patients wrist or ankle using a standard hospital issued ID strap. Tags can be chemically sterilised and worn in the bath/shower and pool.

Tags are monitored 24/7 and are used for security and OH&S when a person approaching hazardous areas as with patients "wandering" from safe areas or approaching exits whilst moving.

### Features

- Tags can be chemically sterilised.
- Reduces supervision required for OH&S and security procedures.
- Long life battery technology - up to 5 years
- High impact resistant UV stabilised PVC case ultrasonically welded and sealed suitable for wearing in the bath/shower and pool.
- Heartbeat transmission rate is once every 20 seconds in normal state.
- Emergency transmission rate is once every 1.5 seconds triggered by internal motion sensor
